50X1-HUM

In the middle of the year 1950 all workmen hired from the surroundings were dismissed and only direct cooperators of Ing KMENT were kept. After the workmen had been dismissed there were rumours among people - [redacted] - that parts for air-plane transmitters (fitted up into air-planes) were manufactured there and people even talked of parts for atomic bombs that were supposed to be hand-screwed in this enterprise. However these accounts were not attached too much importance, since people believed that they were but rumours of dismissed employees.

For all this period Ing KMENT with his cooperators were working in KMENT's laboratory until springtime 1951 when he had his laboratory moved into his villa. All hand-screw machines were carried away from the provisory manufactory and the rest of KMENT's cooperators were transferred so that Ing KMENT has been working in his villa quite alone. Russian engineers still use to come to him, however rather seldom.

[redacted] the majority of inhabitants of that place do not know what was manufactured in this enterprise. A small depot was attached to the enterprise in which there were ready parts and parts ~~for~~ to be fashioned. [redacted]

[redacted] nobody noticed that materials and parts that were fashioned in this enterprise would have been brought in or carried away. One visible thing was an apparatus fixed to a tree in front of the building. This apparatus was of shape of a streamlike motor (a gondola), it was 1 m long and its diameter was 60 - 85 cm. Two cables from the building were running to this apparatus which issued a buzzing sound night and day (like an air-plane). [redacted]

[redacted] the employees of this enterprise were reserved working rooms and entering the same was strictly prohibited even for employees from other working rooms. The study of Ing KMENT was off limits for everybody except KMENT himself.
